LEE, HSIN-YEN (Cindy)

Email: hihiclchrf@gmail.com Website: clchrf.github.io GitHub: github.com/clchrf

PROFILE & OBJECTIVE

Electrical Engineering student focusing on IoT, hardware-software integration, and HCI. Skilled at using AI tools to speed up prototyping and turn complex hardware data into intuitive user interfaces. Looking to apply cross-disciplinary skills and a strong focus on intrinsic safety to medical and human-centric robotics research.

CERTIFICATIONS & AWARDS

Excellent Award, 8th NTNU Start-up Competition (Eden Cube Project) | 2026
2nd Place & Special Award, Mitsubishi Heavy Industries HVAC App Innovation Competition | 2026
1st Place (Grand Prize), SPARKFUL AI Financial Innovation Hackathon | 2025
3rd Place (Maker Category), Meichu Hackathon | 2025
Certifications: Level B Technician for Digital Electronics, Class A Occupational Safety and Health Affairs Supervisor

EDUCATION

National Taiwan Normal University — B.S. in Electrical Engineering | Sep 2025 – Present (Exp: Jun 2028)

- GPA: 4.23 / 4.30 | EMI (English) Coursework: Engineering Mathematics, Technical English
- Advanced Coursework: Graduate-level Robotics (A-), Principles & Applications of MEMS (A+)

National Kaohsiung University of Science and Technology — Electronic Engineering | Sep 2024 – Aug 2025

- Department Rank: 8 / 152 (Top 5%) | GPA: 3.67
- Academic Excellence: Achieved a perfect score (100) in Electronics Practice; A+ in Calculus (I & II), Digital Logic, and Digital Practice.

RESEARCH & PROJECT EXPERIENCE

Research Assistant, MOOCs AI Learning Path Project | NTNU | 2026

- Set up a multi-agent verification system using the Claude Sonnet model, where three independent AI agents cross-checked each other to reduce hallucination and bias.
- Wrote Python scripts to bypass website scraping limits, combining computer vision (frame-transition detection) and OpenAI Whisper to process 308 hours of course videos.

Hardware Prototyping Lead, UWB Smart Transit System | Hsinchu Policy Hackathon (Finalist) | 2025

- Built a working hardware demo connecting UWB (Ultra-Wideband) modules with smartphones to create a hands-free bus payment system, designed specifically to help elderly passengers.

PM & UX Lead, IoT Disaster-Prevention Smart Planter | Meichu Hackathon (3rd Place) | 2025

- Designed the UI and user flow for an iOS app that connects with a LoRa-based smart planter, ensuring reliable offline emergency broadcasts during earthquakes.

Systems Integrator, 3-Axis Robotic Arm | Personal Project | 2025

- Assembled an open-source 3D robotic arm and developed the control software, using Fourier Transform for music-synced movements and MediaPipe for real-time hand gesture control.

LEADERSHIP & ADVOCACY

President, NTNU Transfer Student Association | 2026

- Created a resource website for transfer students. Manually verified all course codes and credit transfer data to ensure 100% accuracy for the 2026 academic year.

Guest Speaker, NTNU Gender in Forum | 2026

- Shared personal experiences as a female engineering student, offering practical advice on studying, working, and surviving in male-dominated tech environments.
